Rules for integrands of the form 
$$(c + dx)^m (a + b(F^{g(e+fx)})^n)^p$$

1. 
$$\left(c + dx\right)^m \left(b F^{g(e+fx)}\right)^n dx$$

If the control variable suseGamma is True, antiderivatives of expressions of the form  $(d + e x)^m (F^{c (a+b x)})^n$  will be much more compactly expressed in terms of the Gamma function instead of elementary functions.

#### \$UseGamma=False;

1: 
$$\int \left(c + d x\right)^m \left(b \ F^{g \ (e+f \, x)}\right)^n \, \text{d} \, x \ \text{when} \ m \, > \, 0 \ \land \ 2 \, m \, \in \, \mathbb{Z}$$

Derivation: Integration by parts
